
Managed Threat Detection Service

Traditional means of security protection are not as effective as they once were – it's impossible to prevent something you do not know or cannot see. In today's digital landscape, it's all about detection and control. Early detection offers protection, keeps you compliant, and allows you maximum time to take effective action. Be confident that you can detect threats and control them so that your business is covered... financially and reputationally.

Detection

Gain confidence through a detection-oriented approach. On 22 February 2018, the Australian government introduced the Notifiable Data Breaches (NDB) scheme, which imposes an obligation on organisations to report data breaches and notify both the affected individual(s) and the Australian Information Commissioner. With this added dimension of liability, it's never been more important to take action to ensure you are aware of potential threats. Detection is the first step towards control.

Visibility

In the event of a security risk or data breach, early detection is critical for implementing a speedy and effective response. Get 168 (24x7) visibility across your organisation's data security with 24x7 monitoring, so you are kept abreast of potential security threats. Speedy notification puts you on the front foot, so you can better control the situation, take pre-emptive measures and mitigate potential damages.

Trust

Your reputation is everything. Your clients need to know they can trust your brand implicitly to do the right thing. In the event of a security threat or data breach, affected clients should find out from you and not from a third party – or worse yet, through the abuse of their breached information. Proactively dealing with security threats and breaches allows you to take a more considered approach and minimise any potential negative impact on client trust and goodwill.

Control

Detection gives you a baseline solution to help you stay in control of your environment, through a proven forensic detection approach, continuous monitoring and timely alerts. Don't get caught off-guard by undetected security threats or data breaches.

Healthy Security Posture

The Brace168 B Aware Service includes:

Security Consulting

Security Assessments

Security Baseline

Application Security

Vulnerability Scanning

PEN Testing

User Access Control Management

How we can help

We at Brace168 have the expertise in identifying and responding to detected threats in a timely manner. With 168 (24x7) oversight on your digital environment, you can be confident in establishing a healthy security posture.
