

2. Alerts

In order to brace for cyber attacks 24 x 7 x 365, you will require a system of automatic alerts when an exception or anomaly arises in your environment. Our managed alert service will:

- Alert on any exception based anomalies pertinent to your environment
- Alert on any non-authorized users
- Alert on privileged user accounts activity.

Alert level evolution

3. Response

What happens when an alert is raised?

The Brace 168 Managed Anti-Breach service will:

- Investigate any exception based alerts
- Triage any false positives
- Respond to any positive based alerts.

Brace168's Managed Anti-Data Breach services are at the last line of visibility of any Internet traffic exiting your network. Conventional security measures are no longer a guarantee of detecting these types of threats. We have the expertise in identifying and ultimately preventing detected threats in a timely manner.

Compliant Reporting and Posture

The Brace 168 B Compliant service includes:

- Visibility and response
- Network Intrusion Detection
- User access activity
- DNS Monitoring (external)

Backed by Forensic IT Expertise

Brace 168 was founded to give larger organisations and established companies cyber and data security 24 hours a day, seven days a week.

Traditional means of security protection which focus on prevention rather than detection are not as effective as they once were. Brace 168 inverts traditional approaches to securing your critical corporate assets: it's impossible to prevent something if you do not know it is there.

How we can help

Led by a team of experienced industry professionals, we use a forensic approach to Detect Breaches. Detection enables you to be alerted and to respond appropriately. Find out more about our Managed Anti-Breach Services today.
